Osmose MicroPro[®] Preservative Technology Receives *UL GREENGUARD GOLD* Certification

Griffin, GA, June 26, 2013 – Osmose, Inc., the premier supplier of wood preservative technologies, announces that its MicroPro preservative technology holds GREENGUARD Gold Certification from UL Environment, a business unit of UL (Underwriters Laboratories).

The GREENGUARD Gold certified process includes testing and certifying products and materials for low chemical emissions (VOCs), helping to reduce indoor air pollution, minimize chemical exposure and create healthier indoor environments. GREENGUARD Gold Certification offers rigorous certification criteria, considers safety factors to account for sensitive individuals (such as children and the elderly), and helps ensure that a product is acceptable for use in environments such as schools and healthcare facilities. It is referenced by both The Collaborative for High Performance Schools (CHPS) and the Leadership in Energy and Environmental Design (LEED) Building Rating System.

UL Environment works to promote global sustainability, environmental health, and safety by supporting the growth and development of environmentally preferable products, services, and organizations. The UL GREENGUARD Gold Certifications are backed by one of the most trusted names in product safety and certifications. UL Environment helps companies achieve their sustainability goals—and help purchasers, specifiers, retailers, governments, and consumers find products they can trust. Products such as the Osmose MicroPro technology with the UL GREENGUARD Gold Certification claims are featured on UL Environment's Sustainable Product Database, a free online tool for specifiers and other purchasers. For more information, visit www.ul.com/environment.
